

EDUCATION

Nanyang Technological University, Singapore Aug 2023 - Aug 2027
Bachelor of Engineering in Computer Engineering, 4.62/5
• Expected Honours (Highest Distinction)

Nanyang Technological University, Singapore Aug 2023 - Aug 2027
Bachelor of Social Sciences in Economics (Second Degree), 4.70/5
• Expected Honours (Highest Distinction)

Raffles Institution, Singapore Jan 2019 - Nov 2020
Singapore-Cambridge GCE Advanced Level, 87.5/90
• Subjects: H2 Physics, H2 Chemistry, H2 Mathematics, H2 Economics, H1 General Paper, H1 Project Work

EXPERIENCE

SGInnovate
Data Analyst Intern May 2026 – Aug 2026
• Developed & modified core data engineering pipelines supporting the company's data infrastructure
• Built end-to-end data pipelines from Alteryx ETL to interactive Tableau dashboards for executive presentation
• Reduced section data bloat by 90% through systemic cleaning techniques, enhancing downstream data analysis
• Engineered scalable pipelines automating scraping and preparation of huge volumes of data daily exceeding 100,000

Garena
Game Developer Intern May 2025 – Dec 2025
• Created many game prototypes in 2-week cycles with Unity (C#) based on proposed idea
• Developed and published multiple games with Authentication, In-App Purchases and Ads, Cloud Save
• Set up analytics and tracked key events and metrics with AppsFlyer and Firebase
• Worked with product managers and designers through Figma and Asset Management Pipelines
• Learnt to develop in Roblox using Lua and created multiple public playable multiplayer experiences

PROJECTS

Park Buddy - Smart Car Parking Companion App | Flutter, Supabase Jan 2026 - May 2026
• Implemented user authentication, database services, storage, and push notifications with Supabase.
• Used Google Maps and data.gov.sg APIs to display nearby car parks and availability in an interactive map.
• Integrated core mobile systems such as location services, push notifications, background services

Home Credit - Credit Risk Model Stability Jan 2026 - May 2026
• Performed data cleaning and aggregation using Pandas, Polar, NumPy
• Performed feature engineering and processing on variety of data types to prepare for training
• Fitted several models like XGBoost, LGBM, and custom ensemble models to perform prediction, achieving top 15%

WhyStars University Timetable Planner | Python, Next.js, Cloudflare, Serverless Mar 2025 – April 2025
• Used Python Beautiful Soup to retrieve data, sort and deposit in object storage automatically with CRON jobs
• Designed an interactive weekly timetable planner with ability to add/schedule courses
• Developed algorithms to intelligently plan timetables automatically based on user requirements
• Integrated authentication and PostgreSQL to save and load user data seamlessly across devices

Hospital Management System | Java, Maven Oct 2024 - Nov 2024
• Developed comprehensive hospital management system in Java, applying principles of object-oriented programming
• Implemented unit testing with JUnit and Mockito, ensuring high code reliability and proper test coverage
• Integrated Git Version Control and GitHub Actions to automate documentation deployment, improving maintainability
• Streamlined workflow by deploying Maven as a build automation tool and dependency management system

RELEVANT COURSEWORK

• Machine Learning, GPU Programming, Microprocessor Development, Operating Systems, Software Engineering

SKILLS

• Languages: Proficient in English & Chinese
• Skills: C#, JavaScript/TypeScript, Unity, C++, C, Java, Python, Linux

AWARDS AND ACHIEVEMENTS

• Recipient of the Hermes-Epitek Innovation Undergraduate Scholarship (2025)
